### **JOHANSON ANNOUNCES NEW LINE OF CASELESS COUPLERS**

Boonton, NJ, September 25, 2009 – Johanson Manufacturing Corp., a leading manufacturer of precision passive components for telecommunications, broadcast, wireless, avionics, defense and medical industries, has announced the production release of its new line of coupler components. The new line was developed in its NJ headquarters facility and produced in volume at its Dominican Republic plant.

The offering is 90° hybrid, dual directional and bi-directional coupler components with superior insertion loss and VSWR at frequency ranges from 30 MHz to 8 GHz with power handling from 50W to 1000W. They are available in two different PCB mounting styles, tab version and surface mount. JMC also has the capabilities to design and manufacture customized couplers to meet your unique electrical or mechanical specifications for both commercial and military applications.

“We are delighted to provide couplers as a natural extension of the core competencies of our company,” says Rocco Melchione, Johanson’s President. “We look forward to couplers becoming an integral and expanding part of our growing product portfolio.”

#### **ABOUT JOHANSON:**

An established brand known for its commitments to quality and customer satisfaction in its market segment, Johanson Manufacturing Corporation designs, manufactures, and sells precision components for the wireless communications, satellite communications, medical, avionics and defense electronics markets with ISO-9001 facilities located in New Jersey and the Dominican Republic.
